Professional Summary

Laravel Backend Developer with 2+ years of experience delivering scalable REST APIs and multi-role administrative systems. Skilled in designing secure backend architectures, implementing Stripe-based escrow payment workflows using manual capture and webhooks, and optimizing database performance. Experienced in building production-level platforms across fintech, healthcare, hospitality, and education domains.

SKILLS

Backend: Laravel, REST APIs, Livewire, PHP,

Payments: Stripe, PayPal

Database: MySQL, PostgreSQL (Learning)

Frontend: JavaScript, AJAX, Alpine.js, Bootstrap, Tailwind CSS, jQuery, React

Tools: Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

SKOPIO APP (Fintech Platform)

Laravel Backend Developer — AKODES IT Solutions (Onsite)

Oct 2025 – March 2026

- Pioneered a Stripe-based financial buffer using manual capture logic, reducing transaction risk by 100% by ensuring funds are only released upon verified contractual milestones.
- Architected a real-time transaction lifecycle system using Stripe webhooks, decreasing manual payment reconciliation time by 90%.
- Built an internal arbitration framework to handle transaction disputes, including automated refund triggers and evidence-based status transitions.
- Optimized onboarding by integrating Google Gemini AI for real-time URL verification, cutting fraudulent registrations by 40% and enhancing KYC efficiency.
- Deployed a high-security communication layer using Laravel Sanctum, supporting a stateless architecture for 5,000+ active mobile and web sessions.
- Constructed a normalized MySQL schema with strategic indexing, resulting in a 35% improvement in API response times for high-concurrency data retrieval.

ROOT APPLICATION — Healthcare System

Oct 2025 – March 2026

Laravel Backend Developer — AKODES IT Solutions (Onsite)

- Conceptualized a unified medical backend supporting high-concurrency workflows for 3 distinct user personas, ensuring 99.9% uptime during peak clinical hours.
- Designed a modular system architecture capable of supporting high-concurrency workflows for diverse medical user personas.
- Established a centralized management console with strict hierarchical access levels to protect sensitive patient and administrative data.
- Streamlined financial operations by implementing PayPal IPN to handle background payment verification and instant transaction reconciliation.
- Engineered complex family-tree module supporting multiple relationships using Balkan tree structure
- Solved intricate relational challenges by building a recursive family-tree module that visualizes poly-parental and sibling connections via Balkan tree structures.

Technologies: Laravel, MySQL, REST APIs, RBAC, FTP, Bootstrap

Laravel Developer — Freelance (Remote)

Feb 2025 – Oct 2025

Hotel Management System

- Programmed a flexible reservation engine with seasonal logic, contributing to a 12% increase in booking accuracy and dynamic pricing efficiency.
- Implemented a real-time mess and inventory tracking module, minimizing kitchen resource wastage by 20% through synchronized guest-order logic.
- Executed an automated Profit & Loss reporting engine that aggregated revenue streams and operational costs, reducing manual reporting time by 70%.
- Created an integrated staff ledger for loans and advances, reducing manual accounting errors by 95%.
- Built a secure internal fund transfer module to facilitate seamless amount transfers between accounts, ensuring 100% data integrity through database transactions (ACID compliance).

Technologies: Laravel, MySQL, JS, AJAX, jQuery , RBAC, FTP, Bootstrap

Laravel Developer-Softagics(Onsite)

July 2023 – Feb 2025

Education Management System (ERP)

- Spearheaded a daily monitoring and reporting module for coordinators, slashing manual attendance reporting time by 80% across multiple campuses.
- Engineered a daily monitoring and reporting module for coordinators, slashing manual attendance reporting time by 80% across multiple campuses.
- Developed a specific reporting feature to aggregate and visualize the previous three months of attendance data for individual students.
- Orchestrated a standardized grading system that processed academic records for over 7,000 students, producing comparative rankings with 100% accuracy.
- Delivered robust REST APIs to ensure seamless data synchronization between the central backend and mobile/web application interfaces.
- Refactored legacy Eloquent queries and optimized relational schemas, leading to a 50% reduction in server load during peak examination periods.

Technologies: Laravel, MySQL, Bootstrap, JS, jQuery, Ajax, Git
